The following are our Preliminary inputs for improvements pertaining to De'lite Software viz.,

1. Save option to be made available even for partly filled forms. Same details are required to be filled multiple times thus not user friendly.
2. Pincode as a mode is misleading. For example the PINCODE 600018 shows (a) Teynampet and (b) Pr. Accountant General. However, property is situated at Abhiramapuram, which is not listed. Also Nandanam, Eldams Road etc., are covered in the said Pincode. Accordingly drop down based on pincode is not exhaustive. What should be done in this case?
3. In the case of undivided share for Flats need to enable mentioning percentage.
4. EC – We are not able to mention the Search Period correctly. For example from to is not functioning.
5. \$ symbol needs to be replaced with Rupee symbol.
6. Address: System is not picking the typed property Address. Rather property address is picked by the lat & long co-ordinates. (in fact the lat & long co-ordinates address is wrong)
7. Status of document attached is complete is not available. Accordingly, not sure whether the document is attached or not. There can be prompt confirming the attachment.
8. Also we are not able to see the attached documents esp. EC documents.
9. While doing Edit function, we are compelled to fill all the particulars once again instead of specific field that needs to be edited.
