PROJECT OBJECTIVE

        To maintain the data of Product Master within the portal for the process of RPA automation.

REQUIREMENTS

- Capturing the Product Master through excel updation or master manual creation by Ecom team.
- The excel file of Product master should have the header name such as Material code, Platform, seller, Product title, Brand, category, variant, Division, MRP, Channel margin, GST, Depot, Depot names. It may be in addition to it in future.
- Depends on new product release, those details should get updated into the portal in similar way.
- The Product master need to be maintained by the Ecom team. If only the report will get generated by the Power Bi tool through RPA method.

AUTOMATION:

- System should allow the RPA to fetch the Product data from the portal.
